

How money played a role in the lives of USA in 2016?

Created by Richa Vyas

As a student of Business Intelligence, I always wanted to take a dive in the data world and find some interesting facts and here I am combining three interesting datasets, choosing the year to be the main common factor. So, let's take a swim in my blog and I assure you, "You will be shocked!!".

It is interesting how money can play a part in our lives. While you are reading this blog, somewhere in the world someone is going to sleep hungry as they don't have a penny. Whereas on the other hand a billionaire is thinking to buy a land on the moon. Now, let me tell you a similar story about United States of America in 2016.

In 2016, the U.S Census Bureau revealed the household income distribution for each state. Astonishingly, 21.3% of households in New Jersey were earning >\$150K in a year and a huge amount of 69.5% of households in Alaska were earning >\$50K per year in the country. Whereas households in Mississippi were earning the lowest amongst all the states with <\$25K per year (Kriebel 2015). So, are you impressed by the earnings of a householder living in New Jersey?

I don't think you should. Now let's discuss about how much the wealthiest company in the world makes with every tick of the clock. You will be shocked as I mentioned before and the number is \$1444.76 per second(Kriebel 2018). Yes, 1444.76 US Dollars and can you guess the company's name. Most of you will be correct, it is Apple.

Finally, let's swim to a different shore in the view of 2016 in the USA. As mentioned above Apple making \$1444.76 in a second on the other hand, people were dying in the United States due to Influenza. The stats say, from 2015-2016, 93 deaths were reported. From 2016-2017, it was increased to 110 and further in 2017-2018 it became 179 (Kriebel 2017).

So, building on that many lives can be saved in a second if a wealthy person can spare their earnings of even a day.
